What we need from the offices

Requirements checklist for the BISU Registrar system, Balilihan Campus · Version 2, 18 October 2026 (replaces version 1 of 17 October)

How to use this list

- It is grouped by **who to ask**: Registrar, Cashier, MIS, the Data Protection Officer, the adviser, and our own team.
- Each item says **what to ask** in plain words and **why** we need it, with an **example answer** (green) showing the kind of reply that helps.
- The tag on the right says when: **First** blocks the next step, **Soon** before the first full request, **Later** for reports and extras.

What we already have

- **One page** of the Citizen's Charter (page 115, Enrollment). It shows how each service is described, but not the steps, fees or processing time.
- **Working with made-up data:** staff sign-in and roles, an activity log, and client records. The login page also opens on a phone over Wi-Fi.
- **Ready to use:** the baseline kit for counting clients and waiting times, and the design of the services and fees screens.

Ground rules for every request

- **Never ask for or carry real student or alumni records**, payment details or ID numbers. Ask for **blank forms and made-up examples** only.
- **The green examples are invented.** They show the kind of answer we need. They are not BISU's rules, so never copy one as an answer.
- Ask for the **official, approved version** of each document, not someone's memory of it.
- For every answer, write down **who** said it (name and position), the **date**, and the **document name and page**. Clear photos or scans are fine if they show no personal data.

The six to get first — these unblock the most work

1	**The rest of the Citizen's Charter**: the Registration Office and Cashier pages with steps, fees, processing time and person responsible (items 1, 21).
2	**The services for the first release** and what each one requires (items 4, 5).
3	**The fee for each service** and the document that approved it (item 19).
4	**What Student and Alumni IDs look like**, with made-up examples, and who keeps the official list (items 6, 7).
5	**Signed permission** from both office heads to start the baseline count (items 18, 25), and the adviser's agreement on the method (item 34).
6	**Defense dates** and a **project lead** named for our team (items 33, 37).

What the answers let us build — so the offices see why we ask

Charter pages and fees

The services and fees screens filled with the real services instead of demo ones.

ID formats and the list

Loading the official student and alumni list, and checking IDs correctly.

Queue and claim rules

Queue tickets, the order of calling, and who may claim a document.

Templates, server, devices

Printing real certificates, and installing the system on campus.

Changes from version 1: grouped by office, with plain wording and made-up example answers. Added: which office name clients see (3), upload or show at the counter and client groups (5), a contact person (9), printer model and paper (11), the Cashier's charter section (21), the baseline permission forms (18, 25, 32a, 34) and the phone test (36). Page 115 of the charter has been received. The "Ref" codes link each item to the team's decision list (System_Plan/90-decisions-and-open-questions.md). This list gathers information only; it does not approve any office rule, fee or policy.

Registrar's Office (Registration Office) items 1–18

	#	What to ask, and why	Example of a helpful answer (made up)	When
☐	1	**The rest of the Citizen's Charter (2024, 1st Edition)**: the whole Registration Office section, especially the pages after page 115 that show each service's steps, fees, processing time and person responsible. Why: the services screens copy the charter's layout. We have only the Enrollment page. Ref D05	*"Here are clear photos of pages 116 to 130, the whole section 5.2."*	First
☐	2	**Is that edition still current, and does Balilihan use it?** The charter covers six campuses. Why: we must build from the edition the office actually follows. Ref D05	*"Yes, the 2024 edition is current. Balilihan follows the university-wide charter; a 2025 edition is coming in June."*	First
☐	3	**Which office name should clients see on screens?** The charter says "Registration Office"; we have been saying "Registrar's Office". Why: the name appears on every screen and printout. Ref D05	*"Use 'Office of the Registrar'. 'Registration Office' is the old charter wording."*	First
☐	4	**Which documents and services should the system handle first, and which are requested most?** Also: is **Enrollment** part of this system, or does it stay outside? Why: we build the most-used services first and leave out what the office handles elsewhere. Ref D01	*"Start with a certification, a transcript request and authentication. Certifications are most requested, about 20 a day. Enrollment stays outside this system."*	First
☐	5	**For each service, what must the client bring or fill in?** If it differs by client (current student, alumni, transferee), list each group, as page 115 does. For each item say whether it can be **uploaded as a photo** or must be **shown at the counter**, and whether a **clearance** from another office (library, accounting) is needed. Why: the request form asks for exactly these things. Ref D05	*"Certification: current students fill in the request form and show their school ID at the counter. Alumni also show a government ID. A representative brings an authorization letter. Library clearance only for transcripts; the clerk checks the signed slip."*	First
☐	6	**What do Student IDs and Alumni IDs look like?** Length, letters or numbers, dashes, leading zeros, whether an ID is ever reused, and whether alumni keep their student ID. Give **made-up** examples. Why: the system currently uses a placeholder rule and refuses real IDs until we know. Ref D04	*"Student IDs are the entry year, a dash, then four digits, like 2099-0042. Zeros at the front are kept. IDs are never reused. Alumni keep their student ID."*	First
☐	7	**The official student and alumni list**: who keeps it, its column headings (a blank copy with headings only), how often it changes, and who fixes duplicates and mistakes. Why: the system loads this list so that it knows who may request documents. Ref D04	*"The records clerk keeps it in Excel: ID, last name, first name, middle name, program, year graduated. Updated each semester. The Registrar decides on duplicates."*	First
☐	8	**How do you make sure a person is really that student or alumnus?** And what should happen when someone forgets their password or loses access? Why: before clients can request online, their account must be linked to the right person. Ref D03	*"They show a school or government ID at the counter and staff compare the name and photo. If they lose access, they come to the office with an ID."*	First

	#	What to ask, and why	Example of a helpful answer (made up)	When
☐	9	**One contact person** who can answer our questions, and who in the office **approves** rules and will **test** the system later. Why: every answer needs an owner, and testing needs real staff. Ref D14	*"Ask the records clerk first. The Registrar approves. Two clerks can test in March."*	First
☐	10	**How do clients line up today?** Office hours and days, lunch break, how senior citizens, persons with disabilities and pregnant women are served, and what happens if a called client is not there. Why: the queue screens follow these rules. The baseline count also measures them. Ref D06	*"8:00 to 5:00, Monday to Friday, open over lunch. One line. Seniors and PWDs go first at window 1. We call three times, then serve the next person."*	Soon
☐	11	**Blank copies of each document the office prints** (certifications and similar), who signs each one, how they are numbered, the paper size, any special paper, and the **printer brand and model**. Is approval a wet signature? Why: we tested making certificates with fake layouts. We must test again with the real blank layout and printer. Ref D08	*"Certification on A4 security paper, signed by the Registrar, numbered by year (2026-0001). Printer: an office laser printer, model on the label. Wet signature."*	Soon
☐	12	**Who may claim a document?** Can a relative or friend claim it, and what must they bring? Why: the release screen checks this before handing over a document. Ref D08	*"Yes, with an authorization letter and both people's IDs. For transcripts, a notarized SPA."*	Soon
☐	13	**How long may a request wait** for missing papers or payment before it is closed? What happens to documents nobody claims, and after how many days? Why: the system sends reminders and lists old requests, but never closes them on its own. Ref D18	*"Incomplete requests close after 30 days, with a reminder after 7. Unclaimed documents are kept for 6 months, then filed."*	Soon
☐	14	**The academic calendar and holiday list**, and how class or work suspensions are announced. Why: processing days are counted in working days, and the queue closes on suspended days. Ref D06, D12	*"The calendar is a PDF from the university. Suspensions are posted on the BISU Facebook page by the President's office."*	Soon
☐	15	**Blank samples of the reports made today** (daily, monthly, semester, academic year) and who receives each one. Why: the system's reports should match what the office already submits. Ref D12	*"A monthly report of documents issued, in Excel, to the Campus Director by the 5th."*	Later
☐	16	**How is client feedback collected today** (the paper satisfaction form)? Who compiles the report? Which languages should clients see on screen? Why: feedback and language options come at the end of the build. Ref D19, D01	*"Paper form at the window, compiled monthly by the clerk. English on screens is fine; Cebuano would be nice later."*	Later
☐	17	**Supplier list**: how suppliers should be rated, how much each point counts, the score that should trigger a review, how often scores reset, and which supplier details and documents to keep. Why: the supplier list is built after the main request flow. Ref D15, D16	*"On-time delivery 40%, quality 40%, complete papers 20%. Review anyone below 70. Reset every year. Keep the business permit expiry date."*	Later

	#	What to ask, and why	Example of a helpful answer (made up)	When
☐	18	**Sign the baseline permission form** (page 2 of the baseline kit), so the team may count arrivals and time service at the counter for about five days, with no names. Why: it gives the thesis a "before" picture to compare with later. Ref OF-4	*"Signed. Observe 21 to 25 October, 9 to 10 and 2 to 3. Stand near the bench by the door. Avoid Friday afternoon."*	First

Cashier's Office items 19–25

	#	What to ask, and why	Example of a helpful answer (made up)	When
☐	19	**The fee for each service**, the document that approved it (board resolution or fee schedule) and since when. Is it per copy, per page or per request? Does it differ by client group? Why: the system computes what a client owes. It must never guess an amount. Ref D05, D07	*"Certification: ₱__ per copy. Transcript: ₱__ per page. Both from Board Resolution No. __, series of 20__, effective June 2024. Same for everyone."*	First
☐	20	**Are some clients exempt from fees or given discounts?** Who approves it, and what proof is needed? Why: a fee waiver needs its own approval step, separate from a free service. Ref D05, D07	*"No discounts. Graduating students get their first certification free, with the Campus Director's approval."*	First
☐	21	**The Cashier's section of the Citizen's Charter**: payment steps, processing time and person responsible. Why: the payment part of the request follows it. Ref D05	*"Section 5.4, pages 140 to 142. Photos attached."*	First
☐	22	**How can clients pay** (cash, bank deposit, e-wallet)? How are official receipts issued and numbered? Who records a payment and who checks it? Why: the Cashier screen records the receipt number and who checked it. Ref D07	*"Cash at the window only. Manual receipt booklets, numbered by series. The cashier issues the receipt; the collecting officer checks the day's receipts at closing."*	First
☐	23	**Partial payments, overpayments and refunds**: are they allowed, and who approves them? Why: these need separate records, never edits to a payment. Ref D07	*"Full payment only. Overpayments are returned on the spot. Refunds are approved by the Accountant."*	Soon
☐	24	**The daily closing time** for payments, and a **blank copy of the daily collection report** (for example the Report of Collections and Deposits). Why: the system's totals must match the official report. Ref D07, D12	*"Payments until 4:00 p.m. The report is prepared daily and given to Accounting the next morning. Blank copy attached."*	Soon
☐	25	**Sign the baseline permission form** for the Cashier's counter (page 2 of the baseline kit). Why: same as item 18, for the payment window. Ref OF-4	*"Signed. Observe in the mornings only. Do not stand behind the window."*	First

MIS / IT Office items 26–31

	#	What to ask, and why	Example of a helpful answer (made up)	When
☐	26	**Which computer will run the system on campus**, what address people will type, whether students on campus Wi-Fi can reach it, how the security padlock (certificate) is handled, and whether its clock is set automatically. Why: the system runs on the campus network only, not the public internet. Ref D02	*"A spare desktop in the MIS room with Ubuntu. Address: registrar.balilihan.local. Reachable from student Wi-Fi. MIS issues the certificate. Clock syncs automatically."*	Soon
☐	27	**A list of office computers, printers and any screens or kiosks**: model, Windows version and browser version. Why: the system needs Chrome or Edge version 111 or newer (2023 onward). Older browsers show broken pages. Ref D10, D20	*"Registrar PC 1: Windows 10, Chrome 129. Cashier PC: Windows 11, Edge 128. One laser printer. No kiosk or TV screen yet."*	Soon
☐	28	**Can the system send emails** (for example password resets) through a campus email account? If not, accounts are activated in person. Why: without email, staff must help clients set up their accounts. Ref D11	*"No campus email server for this. Do in-person activation for now."*	Soon
☐	29	**Backups and monitoring**: how often to back up, how long to keep backups, who checks the system works, and how many people might use it at once on the busiest day. Why: so nothing is lost, and the computer is big enough. Ref D13	*"Back up every night and keep 30 days. MIS checks every Monday. About 300 clients a day during enrollment week."*	Soon
☐	30	**Who owns the program code after the thesis**, and can it move to a BISU-controlled GitHub account? Why: someone must maintain the system after the team graduates. Ref D21	*"MIS will own it. Move it to the campus GitHub account after the final defense."*	Later
☐	31	**Supply Office or BAC** (ask through MIS or directly): is there an existing supplier evaluation form, and should the Registrar's supplier ratings be shared with them? Why: the supplier list should not duplicate an official form. Ref D16, D17	*"Yes, we use a yearly paper evaluation form. Ratings stay internal to the Registrar."*	Later

Data Protection Officer item 32

	#	What to ask, and why	Example of a helpful answer (made up)	When
☐	32	**Three privacy questions.** (a) Is it acceptable for the team to count clients and time service at the counters with **no names** (the baseline kit)? (b) Is a **Privacy Impact Assessment** needed before real student data is used, and is there a template and an approved **privacy notice**? (c) Which student details may the system keep, **for how long**, and how are correction requests and data breaches handled? Why: no real data enters the system until the privacy officer approves. Ref D09, D19	*"(a) Yes, with no photos, and keep the sheets locked. (b) Yes, use the university template; we review it in two weeks. Notice text attached. (c) Name, ID and program only; keep request records 5 years; report breaches to me within 24 hours."*	First (a) Soon (b, c)

IT Thesis Coordinator / adviser items 33–35

	#	What to ask, and why	Example of a helpful answer (made up)	When
☐	33	**Defense dates and required deliverables**, and how the system will be evaluated (for example a quality survey based on ISO/IEC 25010). Why: we plan what must be working by each defense.	*"Progress review on 15 December, final defense in March. Use an ISO 25010 survey with staff, students and IT experts."*	First
☐	34	**Agree the baseline method**: about five days per office, two timed hours a day, no names (show the baseline kit). Why: the before-and-after comparison must use a method the panel accepts.	*"Approved. Add one peak day during enrollment, and report the median waiting time."*	First
☐	35	**Is the extra scope accepted?** The supplier list and the other additions to the plan. Why: we should not build what the panel will not count.	*"Keep the supplier list, but only after the main request flow works."*	Soon

Our team items 36–37

	#	What to do, and why	Example of a helpful answer (made up)	When
☐	36	**Finish the phone test**: on a phone connected to the same Wi-Fi, sign in, open the dashboard and Client records, and write down the phone model, Android or iPhone version and browser version. Then try a second laptop. Why: it shows early whether campus phones and PCs can run the system. Ref OPS-1	*"Phone: a mid-range Android 14 phone, Chrome 129. Sign-in OK, client list OK, buttons a bit small. Laptop 2: Windows 11, Edge, all OK."*	First
☐	37	**Name a project lead** and the other roles, and give every open question an owner and a target date. Why: answers come faster when one person is chasing each one.	*"Lead: Ana. Registrar visits: Ben. Cashier and MIS: Carla. Thesis writing: Dan. Targets: charter pages by 25 October."*	First

Documents to bring back blank or made-up data only

- ☐ Citizen's Charter: all Registration Office and Cashier pages, plus the front pages (edition, date)
- ☐ Fee schedule and the document that approves it
- ☐ Current request forms (blank)
- ☐ Blank certificate and document layouts, paper size and printer model
- ☐ Student/alumni list: column headings only, or a made-up sample
- ☐ Official receipt sample (blank or voided) and the daily collection report (blank)
- ☐ Sample daily, monthly, semester and academic-year reports (blank)
- ☐ Academic calendar and holiday list
- ☐ Office organization chart and list of signatories
- ☐ Two signed baseline permission forms (Registrar and Cashier)
- ☐ Device and browser list from MIS
- ☐ Approved privacy notice and any Privacy Impact Assessment template
- ☐ Supplier evaluation form, if one exists

Tracking: tick each item when received, then note who is chasing the rest.

Project lead _____ Date this list was sent to the offices _____

Registrar's Office contact _____ Cashier's Office contact _____

MIS contact _____ Data Protection Officer contact _____
